- ["Knowledge Prerequisites" on page 5](#)
- ["Windows 2008 specifics" on page 5](#)

M3 API Tools Overview

M3 API Tools is delivered in two forms, as an executable file that is an installation program and as a compressed Zip file. The contents of the two packages are exactly the same.

The installation program is only for installation in a Windows environment.

The Zip file is intended for installation in environments other than Windows such as AIX, Linux and others. The Zip file can also be used for installation on the Windows platform.

The different manual setup required is described in the readme.html file. This file is available in the installation directory after unpacking.

Knowledge Prerequisites

To install this product, you must have knowledge and experience in the following topics:

- Concept of directories and files, to download and to copy files, and to execute programs.
- Administrator level experience in the platform where you are installing the product.

Windows 2008 specifics

In Windows 2008, strong security measures have been implemented.

For M3 API Toolkit, the following security measures must be taken:

- Administrator rights to execute the program to install.
- Administrator rights when setting up the SOAP server and running its console program.
- Administrator rights to be able to use the "Server available test" in MITest.
- The StructBuilder and DocumentGenerator programs require a software component that is no longer delivered with Windows.

It is available for download from several locations on the internet. The name of this component is MSSTDFMT.DLL and it must be placed in the installation directory.

The **dll** must be registered through the REGSVR32.exe facility.

Note: You can execute the programs by choosing "Run as administrator" from the program menus. Also, you can set it as the default behavior in the menu properties

The following topics are covered in this chapter:

- [" Installation Sequence" on page 7](#)

Installation Sequence

Use the corresponding procedure below to install the program or unpack the Zip file.

☐ **To run the installation program**

___ In Windows, double click the MvxAPISetup.exe file.

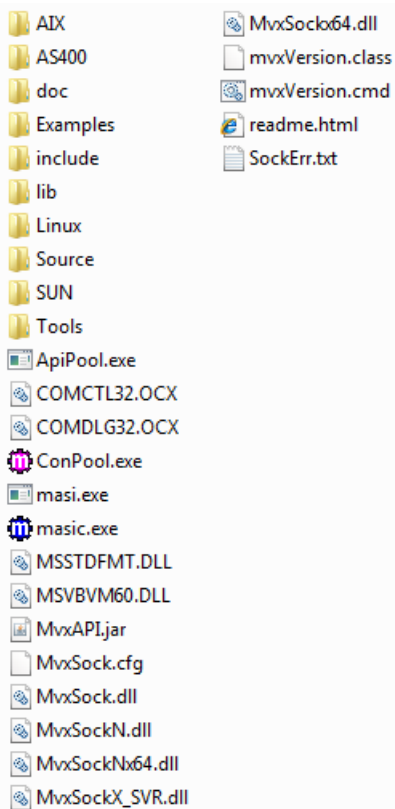

☐ **To unpack the Zip file**

___ In Windows, use WinZip.

___ In UNIX, use the program unZip or its equivalent command.

Directory structure

After installation or unpacking, the installation directory will have the following content:

The top installation directory contains the runtime components for Windows and Java.

Runtime components for the other platforms are located in their respective subdirectory. Other contents such as tool programs, example code and documentation are in the other subdirectories.

The following topics are covered in this chapter:

- ["Uninstalling M3 API Tools" on page 9](#)

Uninstalling M3 API Tools

Depending on which manner you installed the product, use the corresponding uninstallation process below:

Uninstall UNWISE.EXE

If M3 API Toolkit has been installed using the installation program, there is an uninstallation program available. This is located in the installation directory and is named UNWISE.EXE.

You can also use the Install/Uninstall program facility in Windows Control Panel.

Uninstall the Zip file

When the Zip file has been used you only need to delete the installation directory and its content.
